

A conversation with Audrey Hepburn

Audrey, why Albert Einstein?

Because you would not have recognized Pythagoras, Brett.

What?

Pythagoras was the first person to discover, by experimenting with a vibrating cord, that the intervals of the scale which seem to the ear concordant are associated with definite proportions of one string to another. He had a strange theory that everything could be explained in a system of numbers that corresponded to the tones in a musical scale, which in turn corresponded with a pre-existing harmony in the universe. You and I RESONATE together my friend creating part of the perfect universal pitch.

I don't understand.

You asked me a question, and I answered you, Brett.
We resonate together. If you had not asked me,
I could not have answered you, love.

But, I am having difficulty understanding what you are saying to me, Audrey.

And, I am having difficulty answering your questions, Brett,
but we have all-Time left in eternity, and more importantly
than all-Time, we have been given a portion of light,
a known human constant, as God has portioned
His light to the darkness.

Am I the darkness, Audrey?

You see me as a Saint, Brett, but I am in my Purgatory with you.
God always makes clear how much good we might have done
in our lives. He gives us another chance. Like the questions
you ask me, and I answer. When we ask God if we have done
enough, He answers. The development of the soul is the most
significant thing in life, and after life, my harmonic friend.

You were a Saint though, Audrey, recognized
by the Holy Catholic Church or not.

Well, I am flattered that you think so highly of me, Brett.
And, that is part of the reason I have come to you. A girl may
or may not find all of her many different soulmates
in one lifetime. Are you my soulmate, love?

Of course, I would like to be, Audrey, if you were real.

If I were real? Slow down and think my Catholic mystic.
Purgatory is safe ground. Life, where you are, is the danger.
I am assured salvation, but you have no such assurance, Brett.
You are less real than I am, you just don't know it, yet.

When will I KNOW?

Brett, Saint Socrates was also an extraordinary teacher and
spiritual leader. His conception of the soul and his conviction
that the development of the soul is the most significant task in life
once was the central theme of philosophy. Socrates' teaching on
the soul started one of the great changes in the history of thought
and was the most significant change in Greek philosophy as it
prepared the way for Christianity. Did you enjoy me sending
your paintings to Greece, Brett? I bet that was quite a surprise.

Yes, it was. Did you... ?

Would you like a bite of my donut, Brett? It's not powdered.

Thanks.

Hey, have you seen the paper your sister just e-mailed you?
Well, of course, you HAVE NOT. It is not the cure you are
waiting for, but it is still a very interesting idea. Computer
games that enlist players to unlock the mysteries of protein
folding in an effort to fight diseases. The research is
taking place at the University of Washington. These
scientists might just change the way science is done,
and who it is done by. I must go now love.

You finish the rest of my donut.

kiss
